

AMI

The logo for AMI features the letters 'AMI' in a bold, sans-serif font. Below the letters is a semi-circular graphic composed of numerous small, vertical rectangular bars of varying heights, creating a textured, wave-like effect.

More than just conveying

In our day to day practice as a provider of advanced, high performance complete systems, no conveyor system is identical to any other because we are committed to responding to your requirements in a flexible and individual manner, and because the needs differ widely, depending on the customers and the industries in which they operate.

As a medium-sized company, we follow the principles of lean organization. You are therefore always talking to staff who are used to taking decisions. This can save you a considerable amount of time and money in your complete project.

If you seek convincing performance from planning and advice to installation, extension and maintenance of your conveyor system, in good time, always in a dependable and economically effective manner – we are your partner of choice.

Success needs movement

AMI produce plain and toothed belt conveyors, vertical and special conveyors of various designs and dimensions as well as lifting conveyors with transfer stations. AMI stackers and de-stackers permit the use of space-saving stacking bins. Up to 2,400 bins can be de-stacked per hour. We have suitable separators, e.g., belt extractors, slope extractors, bridge pushers, transverse chain pushers, rotary changers as well as swivel separators. Our patented rotary extractor is one of our most innovative products. In contrast with many conventional separator systems, it works even with moving, closed rows of units without slowing down the travelling movement, thereby sorting in a much more efficient way. Another benefit is that the rotary extractor can be located in any position alongside the conveyor with no need to interrupt travel. This gives more flexibility when rearranging operational sequences.

Convincing technology

Conveyor systems that are intelligently designed to meet high technical standards can do much more than simply move goods from A to B. For example, they will bring your efficiency curve up and your operating costs down.

AMI offer comprehensive systems for anything which has to be "moved" within a company, from light-duty conveyor technology to pallet conveyors and from warehouse logistics to the interconnection of production lines.

Each system is unique, made up of components such as belt conveyors, roller conveyors, curves, rotary tables, vertical conveyors and separators. These components are manufactured in various designs according to your individual requirements, offering you a range of benefits: Our sophisticated and rugged designs ensure maximum performance and dependability at a low noise level. They require little maintenance and give easy servicing, easy operation and economic use. Where else will you find a conveyor system that can be profitably overhauled even after being in use for ten years?

Whether required for bins, work-piece carriers, cardboard boxes or trays, for packaged or unpackaged materials, pallets or box pallets: Based on a profound analysis, we plan and design your complete turnkey conveyor system or an extension to your existing system with manual controls or as partly or fully automated systems, with a material flow calculator, warehouse management calculator and a data network up to full integration into your ERP system. Applications range from the incoming goods department. Also, our system can be used in connection with high-bay warehouses and automated warehouses for various types of hardware. Applications range from the incoming goods department to the despatch department.

Consignment and sorting systems provided with our efficient handling robots impress users by their precise and gentle product handling.

If required, distribution and feeder units, automatic covering systems, sorting lines, counting and weighing equipment as well as other tailored special equipment can be integrated.

AMI offer sorting, distribution, consignment and conveyor systems as well as complete production lines or specialized stand-alone units for any application and any industry. Examples:

- pharmaceutical wholesalers
- mailorder outlets
- wholesalers
- beverage industry
- luxury and other food industries
- graphics and printing industries
- automotive industry
- OEMs and suppliers
- glass and ceramic industries
